## VascuBase™

Updated templates to capture the variables required by Physician Quality Reporting Initiative PQRI

Instant documentation of vascular procedures and endovascular interventions using dynamic, customizable and smart templates that accommodate for the ever changing procedure variables.

Advanced follow-up system that is based upon the patient findings and procedures with application of multiple protocols in the same time.

Documentation of outcome of secondary and tertiary interventions!

Longitudinal Follow-up of Vascular Procedures of unlimited parameters e.g. native or graft patency, limb loss, stroke protection, renal function, aneurysm repair etc.

Manage patient's follow-up, generate examination notes, admission and discharge reports, operative notes, pathology notes and follow-up letters.

Integration with PACS and imaging modalities to display intervention DICOM images.

Advanced Outcome Analysis with automatic application of statistical models like Cox Regression, Logistic regression, actuarial analysis, and much more...
